server
  ↳ hosting on cloud
  ↳ local server → port no

API Testing
  ↳ UI design
  ↳ Postman → endpoints, data, status, method

Runs on localhost:3000 → | server.js | → (API) service
                                          ↳ program
                            http ↳ capability to response to a request
                                 → Application Program Interface
                         Node.js

RestAPI
  ↳ express.js
    ① Resources /1
      ↳ stateless
    ② http → get, post, put, patch, delete

C → create a employee (post)
R → get the employee (get)
U → [put, patch, post] —
D → delete a employee (delete)

Entities / Resources
  req → return ⇒ emp. data.
  /employee   returns
  /employee ① ⇒ specific emp. data
                         specific emp. data

Employee
{ name: Alina
  age: 20
  city: "Mumbai" }

Req-body
{ name: Alina ✓
  age: 20   Mumbai
  city: Mumbai }

Create → ⬜
  form

Middleware   http req
  ↳ forward   Pipeline
order of   ① ② ③   ← express.json()
middleware
matter   1st response
            next

middleware
req → post /employee [§] → req Body (json)
express.json()
